

list view

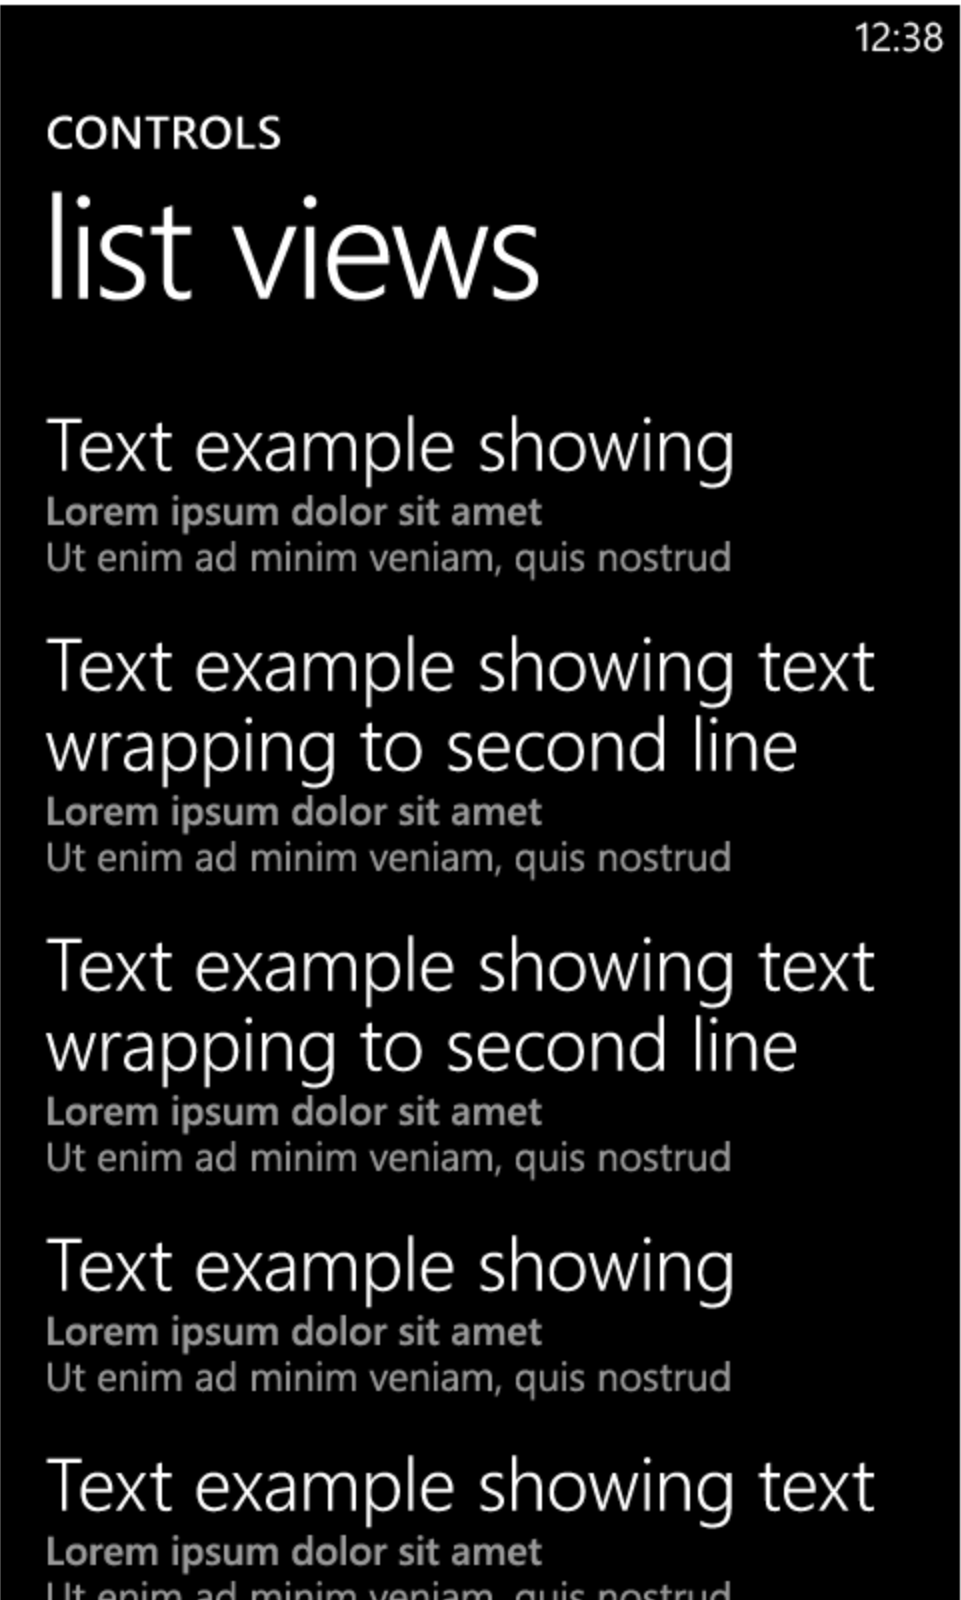

The list view displays a set of list items containing data and/or images. It does this by giving application developers the ability to display this data in a vertical list or a grid. There are a set of standard layouts for the list view, however applications may opt to provide a richer presentation for some scenarios by using a custom layout. When this control is used, the list view typically covers the majority of the screen.

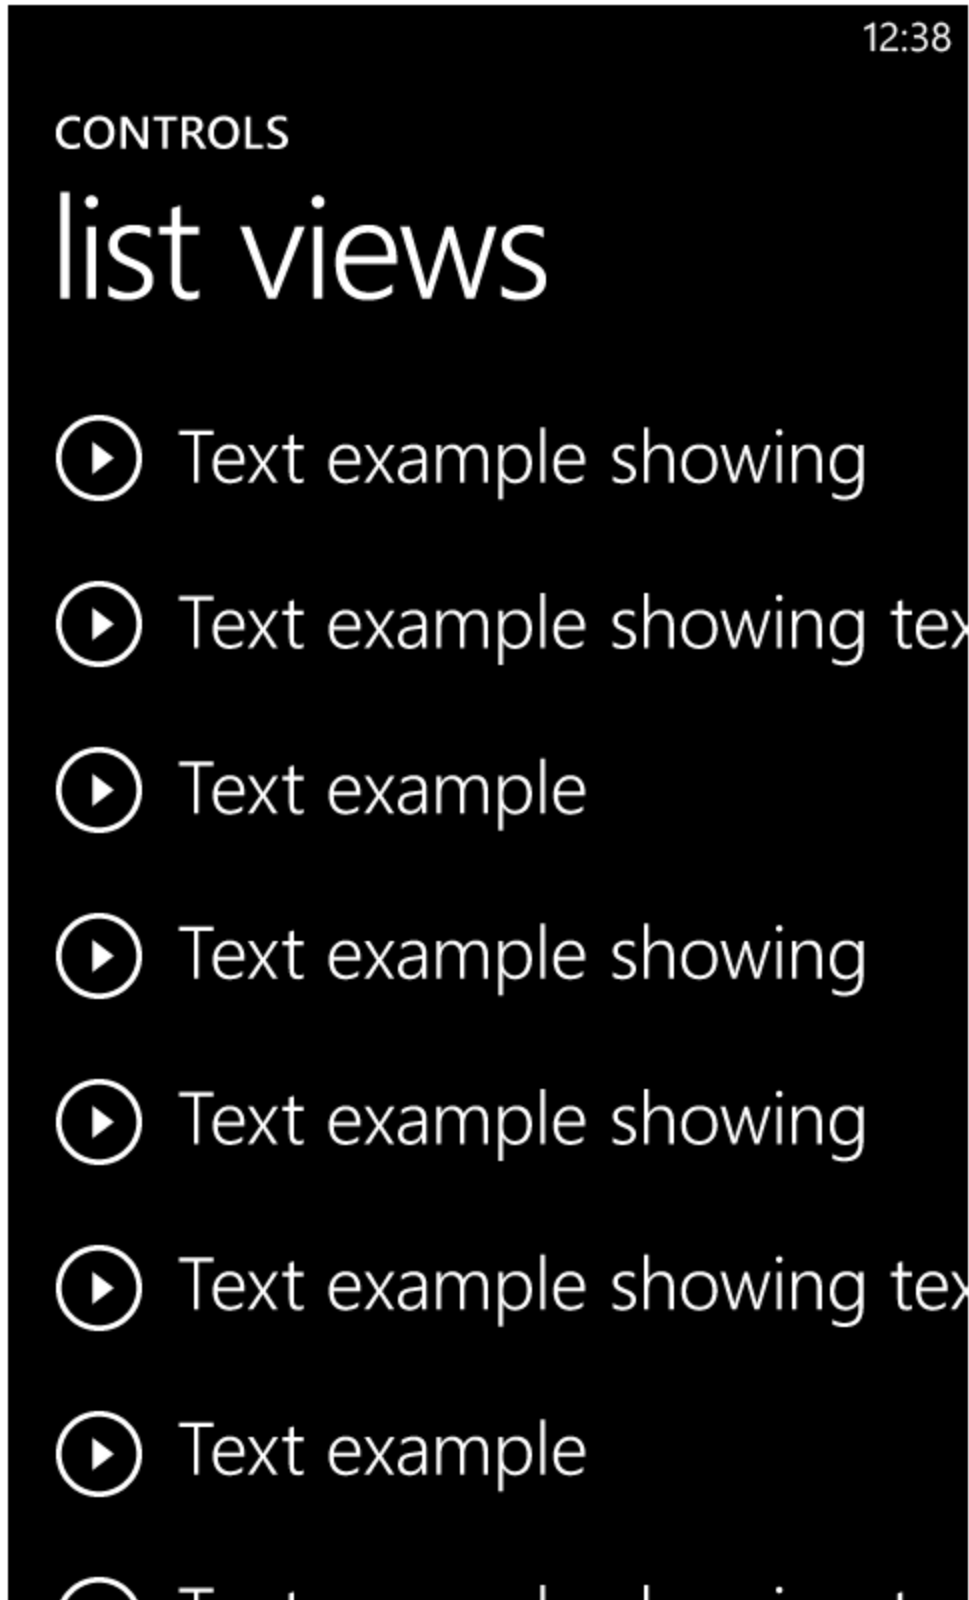

LIST VIEW
Showing a single line list with wrapping
