

dialog boxes

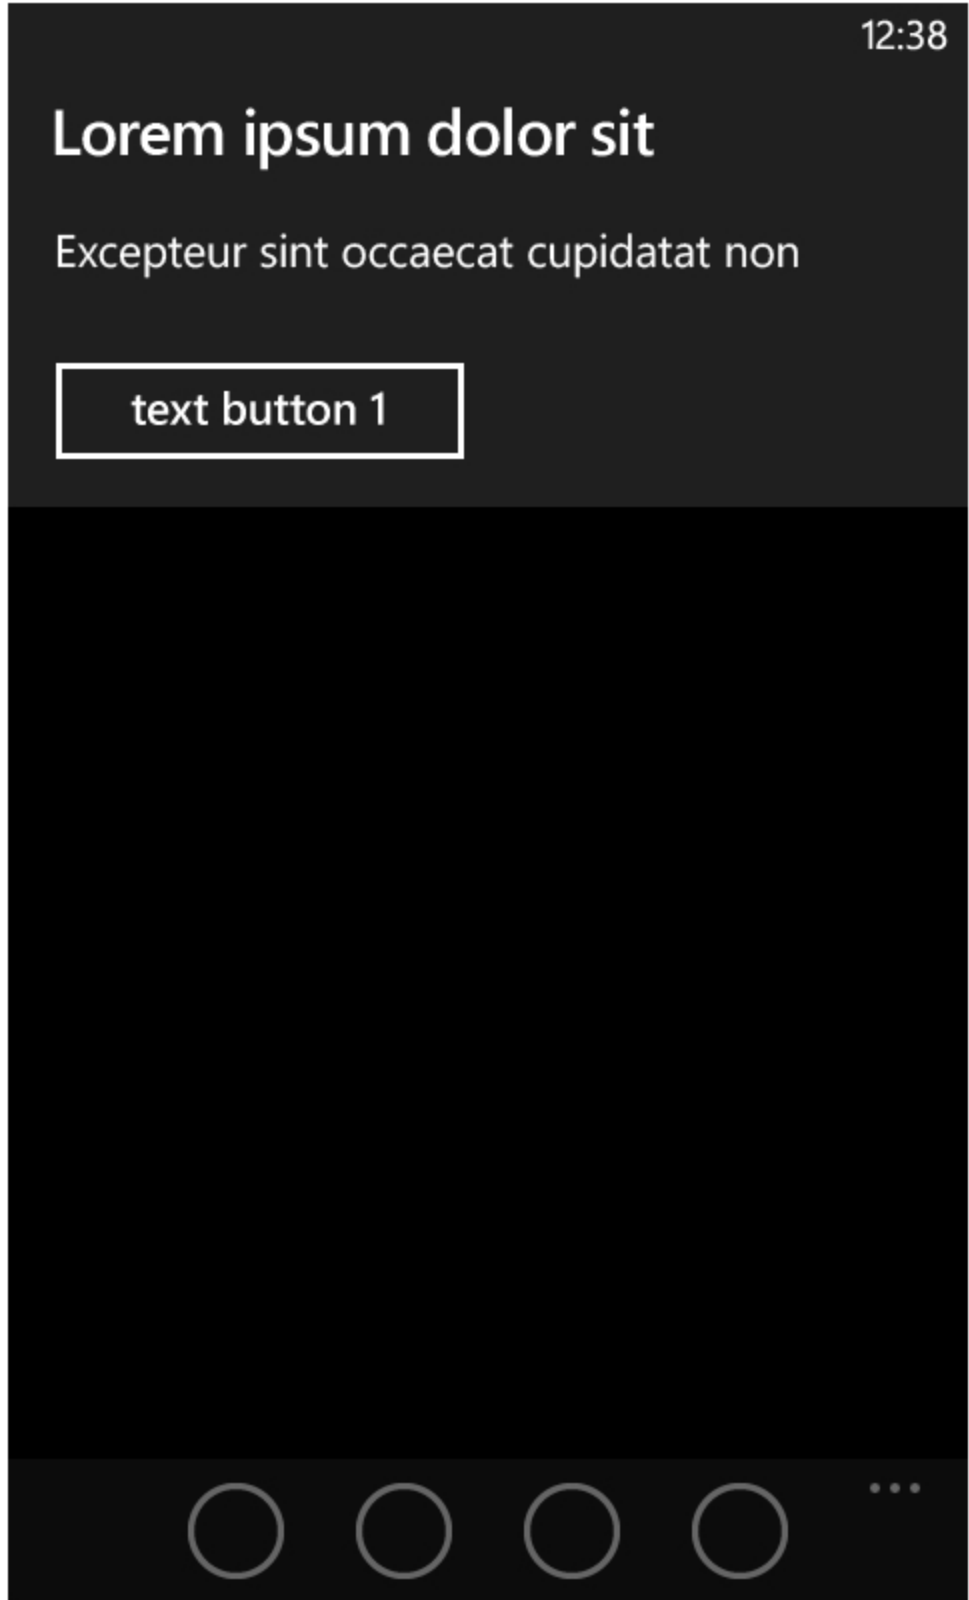

A dialog box is a partial screen element and a way of communicating important information to users. Dialog boxes should rarely be used for system wide interruptions.

Application design considerations:

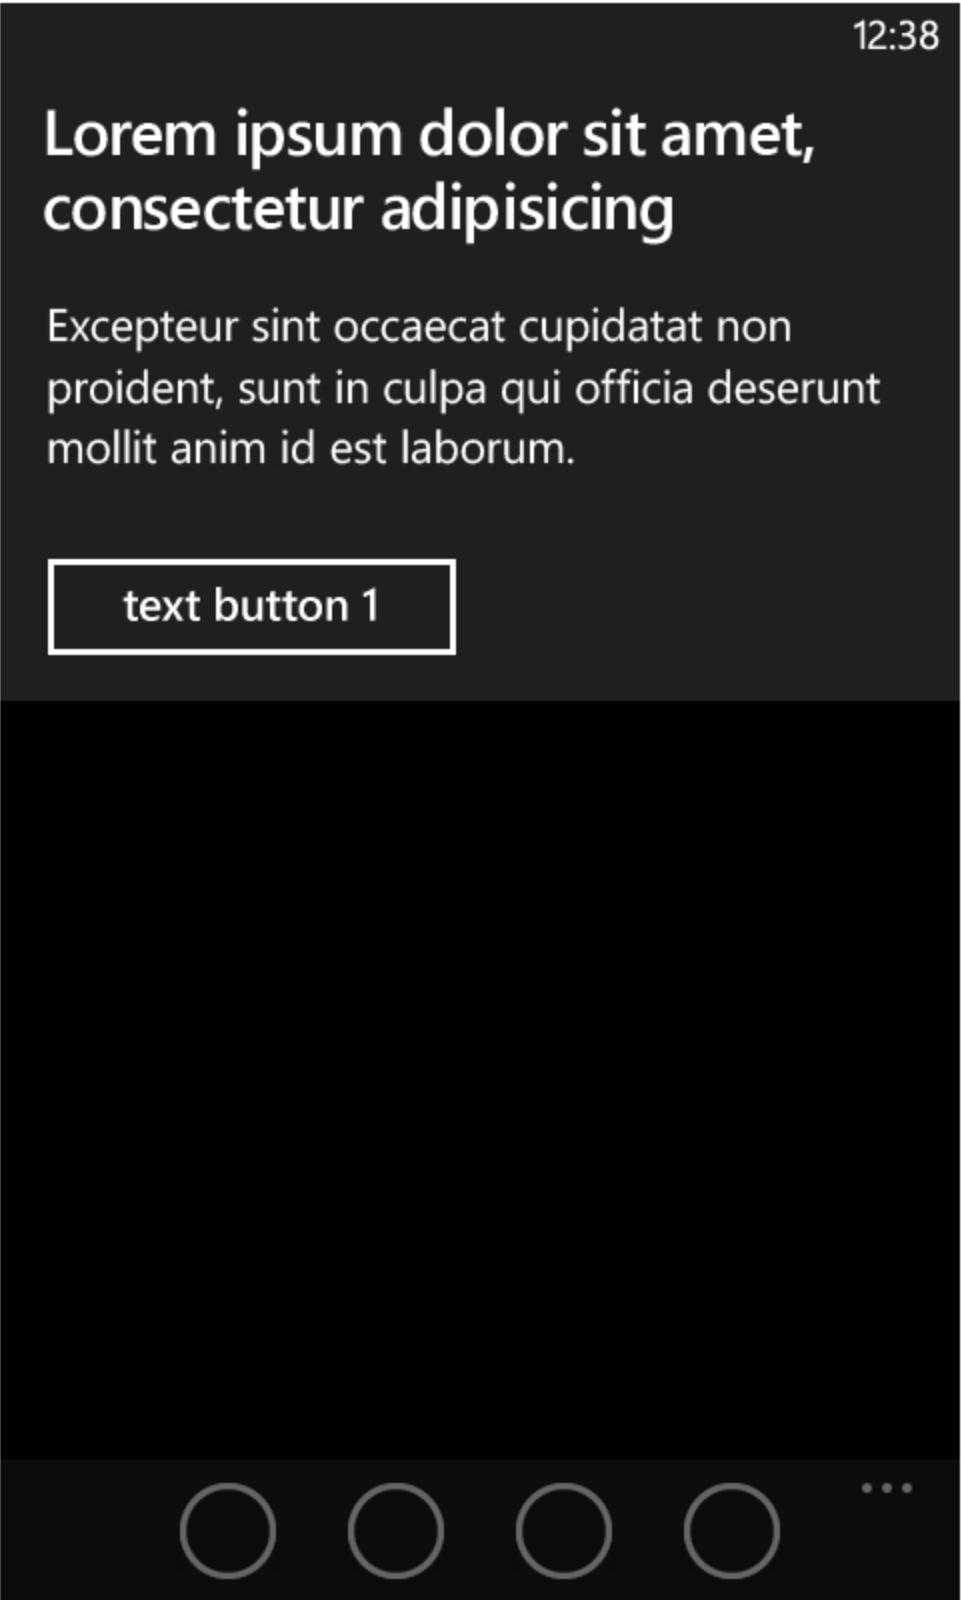

- Dialog boxes will cover up the top portion of the application UI.
- Dialog boxes have a minimum and maximum height.
- Dialog boxes can display 0-2 buttons.
- All dialog boxes are cancellable by the back button.
- Avoid nesting dialog boxes.

Dialog boxes may contain:

- Check box
- Radio button
- Link control
- Push button
- Toggle button

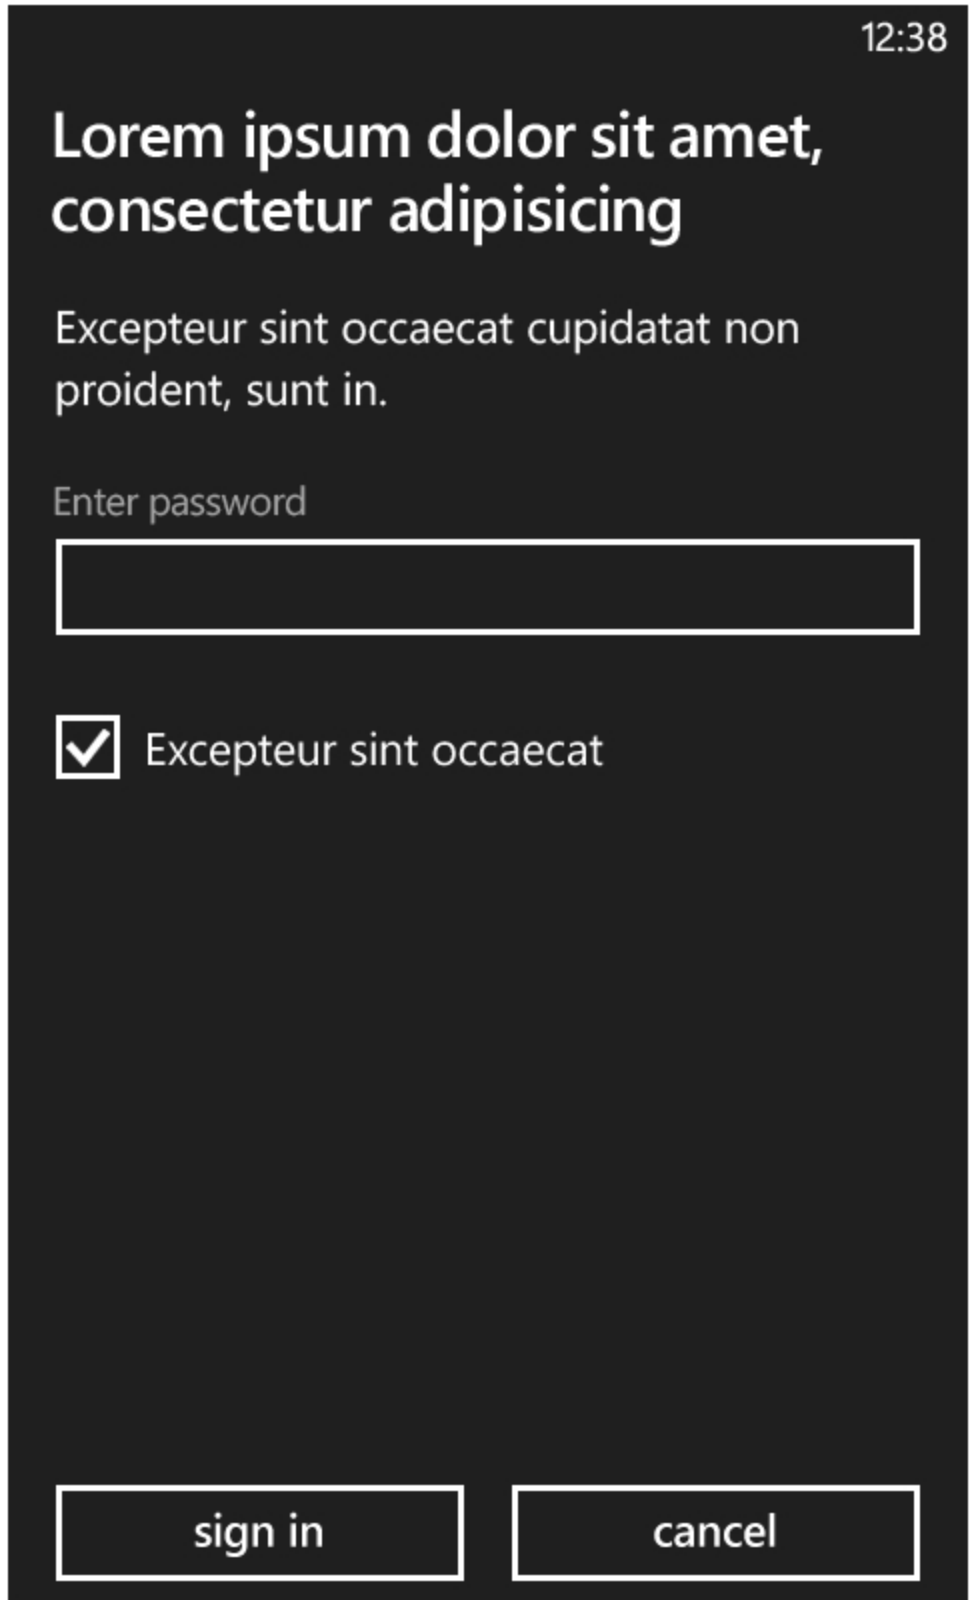

MESSAGE BOX
Shown at minimum height with all elements

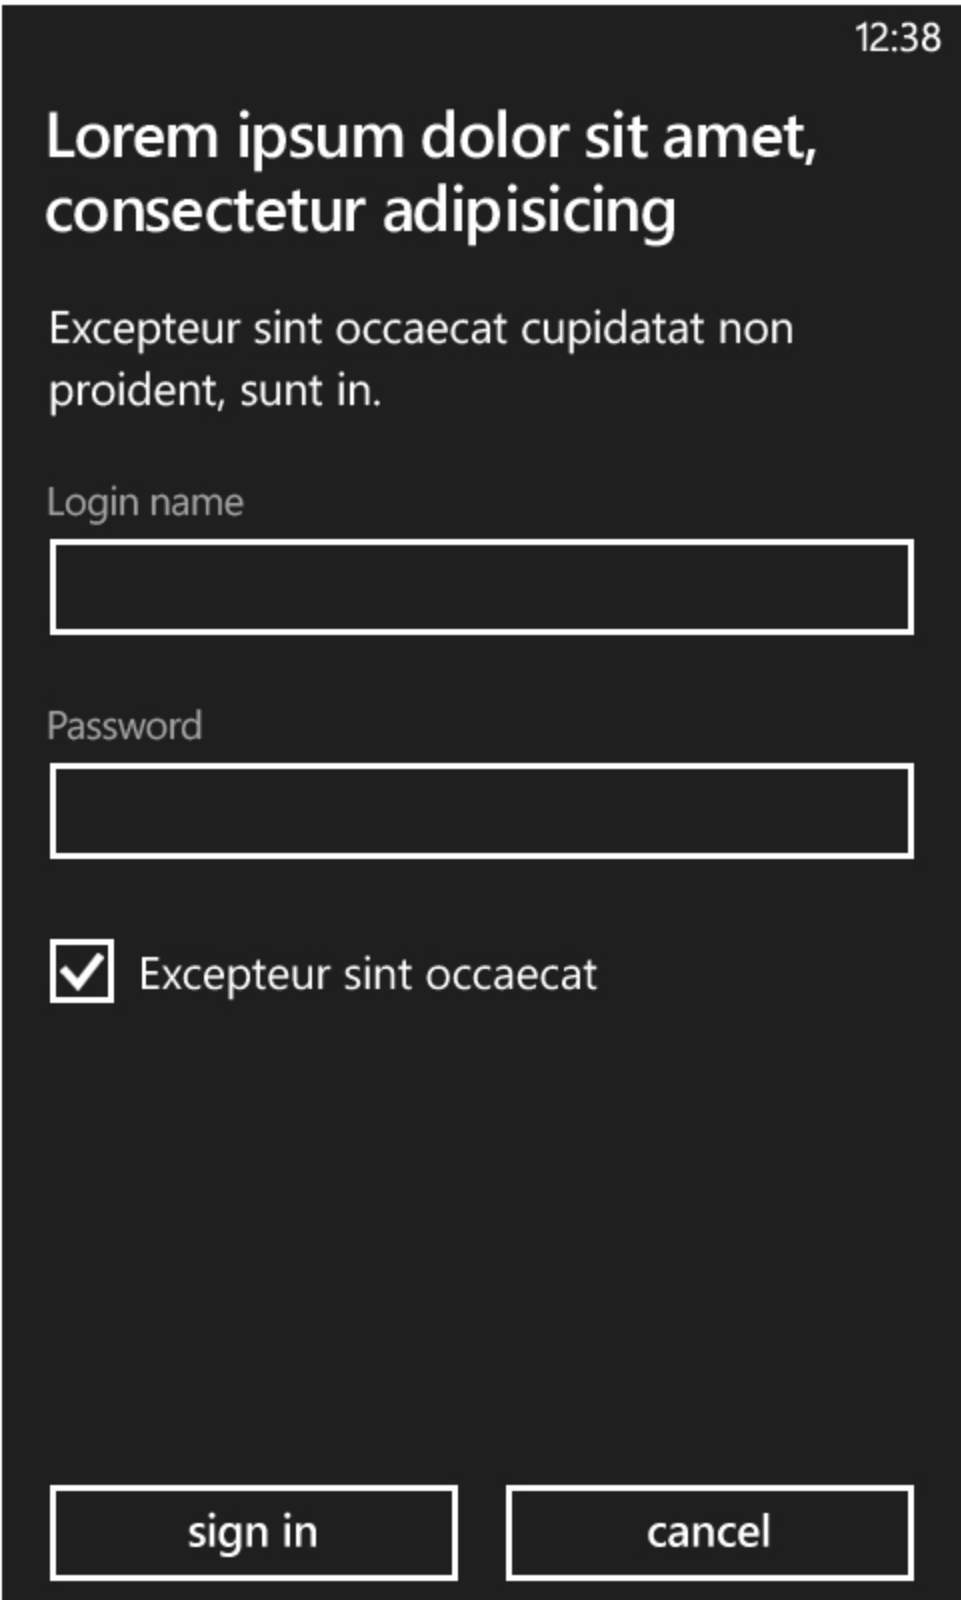

MESSAGE BOX
Showing wrapped, double-line header text

MESSAGE BOX
Shown with inline check box control

DIALOG WITH TEXT INPUT
Showing a password entry field and check box

CUSTOM DIALOG
Robust dialog with login/password fields
