

# time picker

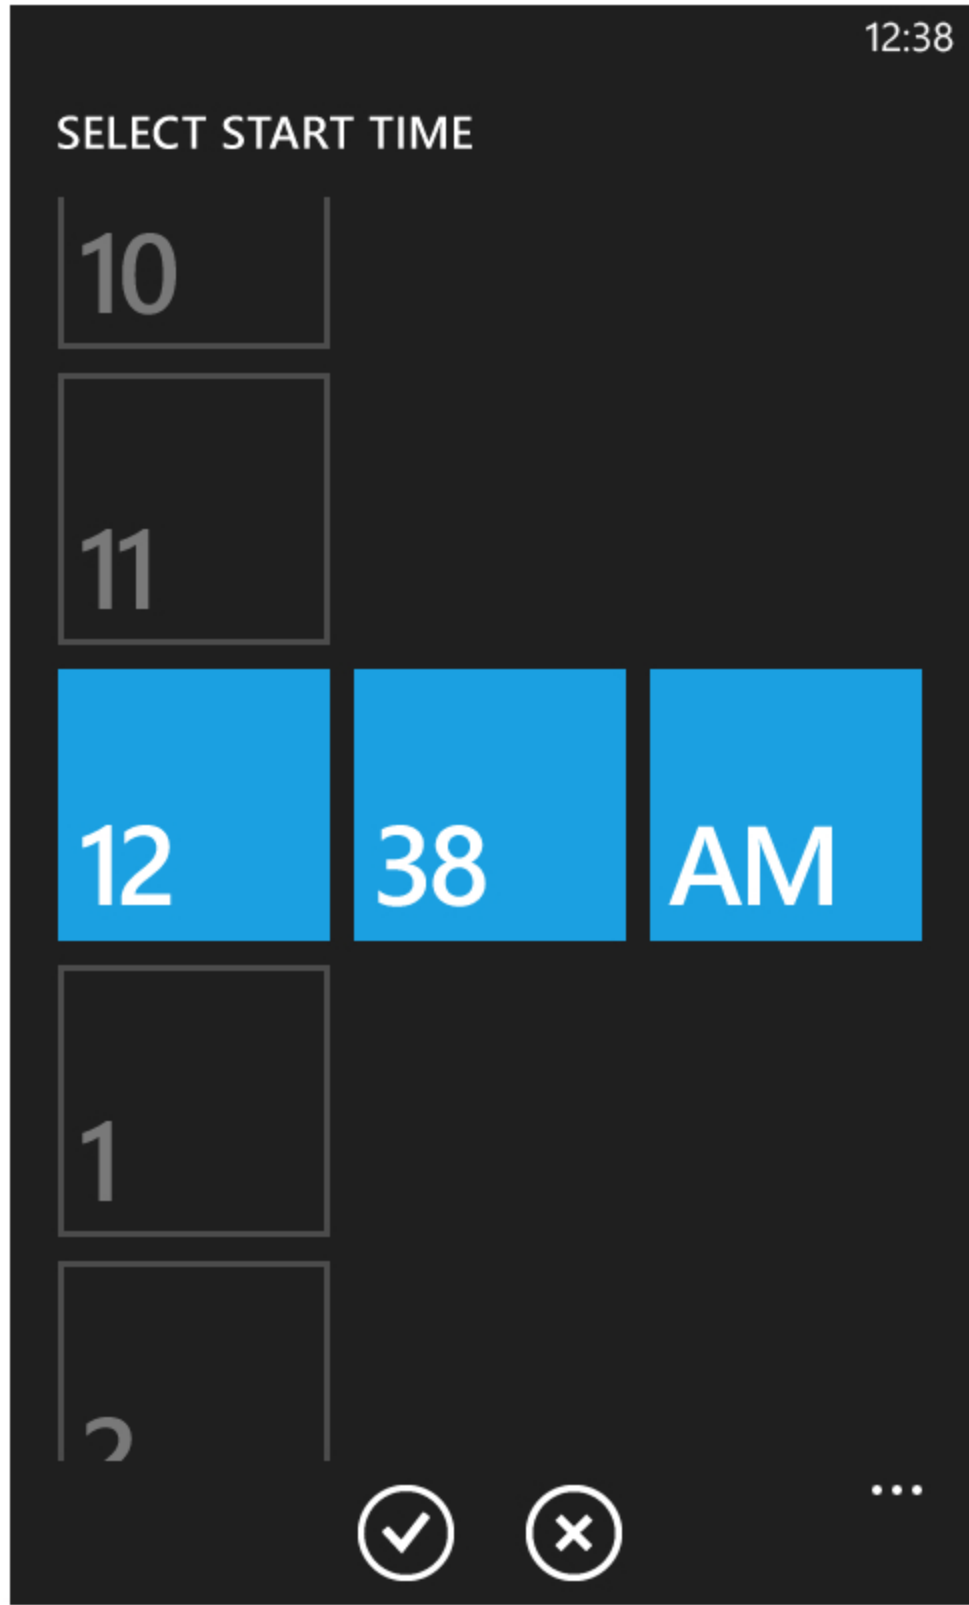

A time picker is used to select a specific time. To access the time picker, the user taps on a button which is prefilled with the appropriate time for the application. Upon button tap, time picker opens and contains “Done” and “Cancel” buttons. Once in time picker, the user uses the flick and pan gesture up and down to scroll the hours and minutes. Each digit (10s and 1s) of minutes values are selected individually. Either the 12 or 24 hour clock format is used, respecting users’ system preferences.
