

# check box

You can use the check box control in groups to display multiple choices from which the user can select one or more. The check box control is similar to the radio button control in that each is used to indicate a selection that is made by the user. They differ in that only one radio button in a group can be selected at a time. With the check box control, however, any number of check boxes may be selected. Check box labels can wrap to two lines of text.
