

context menu

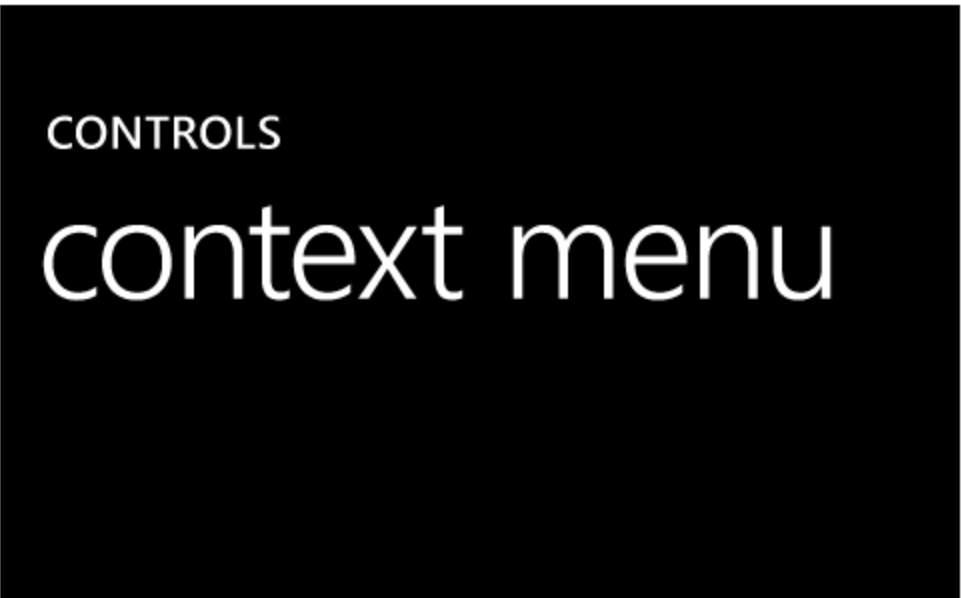

The context menu offers an additional way for the user to access specific tasks. They are intended to be a way to accelerate a user's workflow, and should never be the only way to accomplish a specific task. The context menu should be used to express secondary or advanced actions to the user, never primary tasks, and may have no more than five items.

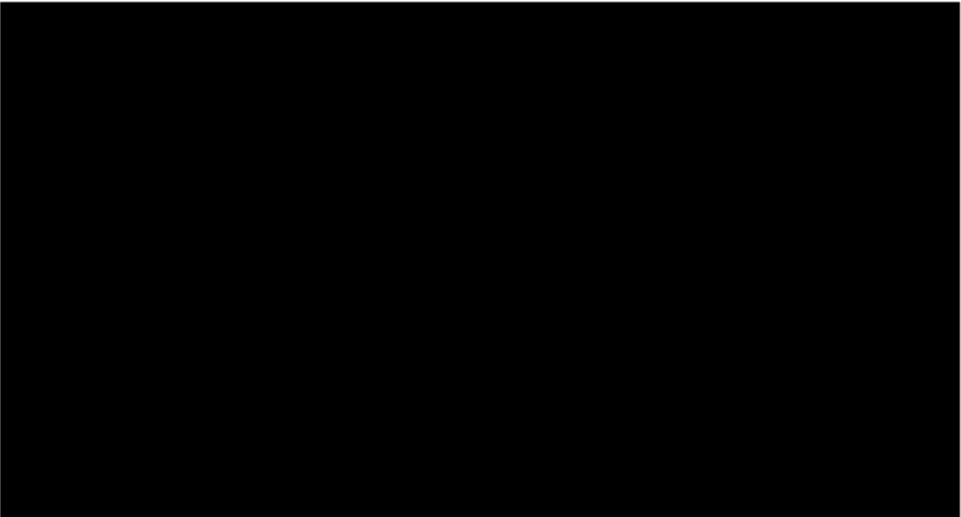

- reply all
- forward
- mark as unread
- flag for follow up
- move to
