

The South Australia Power Network (SAPN) is an energy distribution company in South Australia that builds and maintains a network that delivers power to around 850,000 customers. It is committed to high levels of service, reliability, and safety.

“With Microsoft Project Online, we’ve been able to consolidate all of our project management data into one system, which has led to efficiency gains, provided greater visibility of project status, and enabled us to really drill into the quality of the project management.”

Dan Butcher,
Corporate Portfolio Manager, SAPN

SITUATION

SAPN needed a seamless, standardized way for its IT department to manage all active and future projects at the same time. It wanted more visibility on projects including automated standard reports without incurring infrastructure costs, so it decided to deploy Microsoft Project Online. The company also uses Project Online for organizational resource management to match IT workload with resources available.

BENEFITS

- Real-time visibility across all projects, programs, and resources
- High-quality, high-reliability data that only needs to be entered one time
- Improved productivity and processes that can evolve with the needs of the business
